

Develop Solana Staking API with Prestaker Program RustGo

[Apply Now](#)

Company: Braintrust

Location: Kuwait City

Category: arts-design-entertainment-sports-and-media

Funds (\$SOL) are sent to the program as a regular transaction

Funds are automatically delegated to our validator

The program regularly claims Jito MEV rewards and stakes them, too

The program can unstake funds and send them to a withdrawal address (command from API)

The program has an escape hatch (time-delayed forced withdrawal feature) that withdraws all staked funds to the withdrawal address in case there was no health ping for 7 days.

Updates to the program require squad multisig access
